Sir,

We report a 7-year-old boy presented to our department for a newly appearing lesion of the cheek. He had no past medical history and there was not a history of trauma preceding the onset of the cutaneous lesion. Dermatologic examination revealed an erythematous small lesion with small vessels radiating from the center to the periphery located on the left cheek (Fig. 1). Dermoscopy revealed a vascular pattern with small telangiectasia and a stellate network (Fig. 2). The telangiectasias disappeared when pressure was applied with the dermoscope’s glass (Fig. 3). The diagnosis of spider angioma was retained. An abdominal examination didn’t reveal hepatomegaly or splenomegaly. Laboratory tests excluded the diagnosis of hepatitis, hepatic deficiency or cirrhosis. The patient was scheduled for a treatment with pulsed dye laser for his small vascular lesion.

Spider angiomas are lesions that appear as red spots, shiny, with numerous microvascular radiations which pale when pressure on a central spot is temporarily applied [1-2]. This condition was frequently associated with hepatic abnormalities [3]. Spider angiomas also called nevus araneus are lesions that appear as bright red small shiny lesions with numerous microvascular radiations which pale when pressure on a central spot is temporarily applied [1-3]. These lesions are made of small vessels radiating from center to peripheric zone. They are called spider angiomas because of their characteristic appearance resembling spider crotch. Nevus araneus has a small central artery that could pulsate. Several dilated vessels radiate from the central area. Compression of the central arteriole caused the entire lesion to blanch, and it quickly refilled once the compression was released. This pattern of blanching and refilling characterized spider angiomas [4]. The exact...
Spider angioma is a condition frequently associated with hepatic abnormalities. It can occur in children and has no pathologic signification. Dermoscopy could be helpful for the diagnosis of this facial vascular lesion.
